Why use Kirby Lester counters?

Perfect For Many Industries

- Pharmaceutical companies that require non-assembly line counting and verification, in areas such as R&D, QC, laboratories and packaging
- Contract manufacturing organizations that service the pharmaceutical industry
- Reverse pharmaceutical distributors that need to accurately inventory medications before destruction
- Supplement, vitamin and nutraceutical manufacturers
- Clinical trial organizations that pre-pack vials and verify patient medication quantities
- Law enforcement
- Any facility that requires high-volume counting and packing of medications

Accurate

- Kirby Lester counting technology is the "gold-standard"
- Eliminate hand-counting forever
- Excellent for inventory counting

Affordable

- Powerful technology at a fraction of the cost of other automation
- Plenty of options - from simple counting to sleek robotic dispensing
- Full ROI in months, not years

Reliable

- Trusted for 40+ years by 40,000 customers in 40 countries
- World-class customer service

Simple

- Increase employee satisfaction
- Compact and easy to install
- Learn how to use in minutes
- Removable "contact part kit" on KL1

Greater Counting Accuracy, Improved Operating Efficiency and Lowered Costs

Only from Kirby Lester QC, Counting and Batch-Filling Technology

For more than two decades, Kirby Lester has offered a complete range of automated counting systems for manufacturing, check-counting, and small- to large-scale packaging/repacking. We have taken the same patented counting technology that has made us the world leader in pharmacy counting and applied it adeptly to meet a wide variety of needs in pharmaceutical and nutraceutical packing, QC, and validation. For simple tablet counters/pill counters up to counting machines that easily handle a few hundred to a few thousand bottles at a time, Kirby Lester has the right line of affordable, always-accurate, compact systems for your facility.

Kirby Lester's Full Line of Check-Counting and Packaging Devices – Affordable, Accurate Options

For pharmaceutical and nutraceutical suppliers, manufacturing, clinical trials, QC/QA departments, law enforcement, and any facility requiring high-speed counting

Case Studies: Kirby Lester Technology In Manufacturing

Quality checks on the packaging line or R&D lab

A West Coast supplements manufacturer compared hand-counting to machine counting. Hand-counting 100-count bottles resulted in inaccuracy as high as five capsules per bottle. Plus, hand-counting took more than 15 seconds longer than using a Kirby Lester tablet counter.

Physical Inventory

A Midwest facility compared hand-counting to KL1 for physical inventory. Hand-counting took two technicians 32 man-hours. With a KL1, two technicians needed only 8 man-hours.

Low- to mid-volume bottling runs

A West Coast contract manufacturer that routinely turned down low-volume contracts installed a KL200 counter-filler and completed three low-volume contracts in the same year.

Packaging for clinical trials

A Midwest clinical trials organization expanded into Phase II trial preparation after installing two KL50ic fillers, something it could not have done without Kirby Lester automation.

KL1

Eliminate hand tray and scale counting with our "gold-standard" KL1 tablet counter. Avoid overcounts or undercounts. Just pour and count, no calibration needed. Light and transportable. KL1 features removable "contact part kit" to eliminate the potential for cross-contamination.

KL25

Automatic tablet counter for lower-volume counting and packaging. Hands-free counting. Needs no adjustment or calibration for different medications. Count mode and Pack mode. Counts up to 820 parts/minute. Speeds inventory.

KL50ic

KL50icf

Fast, automatic tablet counter for medium-volume counting and packaging. Bowl holds 500 tablets and counts up to 1,920 parts/minute. Rotating high-capacity feeder available for holding up to 3,500 additional tablets (KL50icf). Needs no adjustment or calibration for different medications.

KL200

Fast, automatic tablet counter for high-volume counting and packaging. Bowl holds 500 tablets and counts up to 1,920 parts/minute. High-capacity feeder available for holding up to 25,000 additional tablets. Needs no adjustment or calibration for different medications.
